

Archiver

Control and Leverage Legacy Studies In One Place!

Silverback® Archiver empowers organizations to store legacy studies on a short term, midterm or long-term basis depending on business objectives and priorities. The Archiver may be deployed at an acquisition or legacy site to speed the migration process by shortening transport and bandwidth requirements. As a temporary archive, it may serve to bridge a system until the new destination, PACS and/or VNA is ready for production. As a long-term solution, the Archiver enables organization to determine the optimal level of legacy studies to maintain within the new PACS and/or VNA.

Silverback® Advantage

- ✓ Enable single and central location for studies
- ✓ Ensure complete customer control of legacy data
- ✓ Customize compliance, prefetch, and migration activities
- ✓ Archive studies independent of a proprietary database
- ✓ Provide flexibility for multisite deployments

Trust the Leaders in Imaging Interoperability

- 2B+** Studies Managed
- 100+** Health Systems Integrated
- 100%** U.S.-based Development and Support

DataFirst is the leader in solving the toughest imaging interoperability workflows with it's Silverback® Workflow Engine.
